DermaGinate/Ag™

Alginate Dressing with Antibacterial Silver

New & Improved! DermaGinate/Ag is an alginate wound dressing with broad spectrum antibacterial silver for moderate to high exudating wounds. Completely redeveloped for improved absorption and fluid retention while providing controlled release antibacterial silver. Forms a soothing, gel-like consistency on contact with moisture, yet maintains integrity for convenient removal.

Benefits:

- Absorbs moderate to heavy exudate
- Allows for intact removal of gelled alginate
- Assists with moist wound healing and autolysis
- Assists with bioburden management of infected wounds
- Silver protects against microbial contamination of the dressing, helping to control odor
- White to off-white color won't mask exudate assessment

Indications:

A primary dressing for the management of moderate to heavily exudating partial to full thickness wounds, including:

- postoperative wounds
- pressure ulcers
- diabetic ulcers
- donor sites
- trauma wounds
- leg ulcers
- grafts
