

seca 452

Product Number 452 0050 009

Interface module to transmit measurements to EMR systems

Plus delivery costs

Product Properties

- Data transmission via WLAN or LAN
- Patient identification right on device
- No transcription errors

Interface module to transmit measurements to EMR systems.

With the seca 452 interface module, seca scales and measuring stations can be retrofitted with little effort and can then be fully integrated via the seca connect 103 software. The module is attached directly to the product with an easy-to-mount bracket and then configured centrally via the software. LEDs signal readiness for use, give the user feedback on the scanned patient barcode and confirm when the measured values have been successfully transferred to the digital patient file. The integration of scales into your HIS is realized in a joint project with our seca integration team. Contact us to discuss and plan your integration project without obligation.

Scope of Delivery

- Power adapter
- Scanner mount
- Barcode confirm sticker
- Data cable
- seca 452
- seca 452 bracket
