ComfiTel™ Silicone Contact Layer Dressing

ComfiTel is a silicone contact wound dressing that adheres gently to intact skin, but not to wounds. Reduces pain and potential trauma during dressing removal. Porous mesh design allows wound exudate to pass through to absorbent dressing materials. Allows for more frequent dressing changes while protecting from wound trauma. Comfortable and conformable.

Benefits:

- Minimizes pain and potential trauma during dressing removal
- Semi-transparent for easy wound assesment.
- Does not contain latex

Indications:

Use as a protective barrier between wound and outer dressing for a variety of wounds, including:

- Venous ulcers
- Dry to heavily exudating abrasions
- Surgical/trauma wounds
- Cuts and lacerations
- Pressure ulcers
- 1st and 2nd degree burns
