

Hand Control with Display

The **advantage** of real-time feedback

Intuitive Design

The Handicare A-Series control puts all control functions and diagnostic information in your hand. With an ergonomic, waterproof design (rated IPx6/ IPx7), the A-Series hand controller fully operates all lift functions from an easy to use digital control pad.

Three Operating Modes

More than just operating the lift, the A-Series hand controller helps you gather and record weight information for a patient while simultaneously collecting data on the lift's use and performance.

- 1 Control
- 2 Weighing
- 3 Data Collection
