

Xtrasorb® HCS (*Hydrogel Colloidal Sheet*)

For dry to moderately exuding wounds
– with and without adhesive border

Xtrasorb® HCS is a **Super Absorbent Polymer (SAP)**–based hybrid of a hydrogel and a hydrocolloid dressing. The addition of sodium carboxymethyl cellulose (a key ingredient in traditional hydrocolloids and the base component in hydrofiber) and the SAP gel formulation to a water/glycerin hydrogel base helps this unique dressing offer hydration for dry to moderately exuding wounds, while delivering superior absorption capabilities for moderately exuding wounds.

Provides the hydration of a hydrogel while absorbing up to 4 times more liquid than competitive hydrocolloid dressings*¹

*Test performed using Inverted Paddington Cups. Modified Test Methodology BS EN:13726-1:2002 Part 3.3. This determines Total Fluid Handling (Absorption + Moisture Vapor Loss) of different dressings, measured in grams per square meters per 24 hours. Tests carried out at 55% relative humidity.

Xtrasorb® dressings come in a variety of formats and sizes. Each absorbs and retains more moisture than market leading competitive dressings.¹ The exceptional fluid retention and moisture vapor transmission may contribute to increased time between dressing changes and reduce risk of maceration and exposure to the harmful components within wound fluid. The dressings, designed to improve patient care and deliver clinical efficiency, can be used on an assortment of chronic and acute wounds including:

- Pressure Ulcers
- Venous Leg Ulcers
- Arterial Ulcers
- Diabetic Foot Ulcers
- Post-Op Wounds
- Traumatic Wounds
- Donor Sites
- First- and Second-Degree Burns
