

Hip Fractures

More than 95% of all hip fractures are caused by falls. The majority of hip fractures occur in adults over 65 years old. Fall-related injuries such as hip fractures are associated with increased mortality and a major cause of loss of functional capacity and impaired quality of life. Hip fractures are one of the largest health concerns in nursing homes as well as an extremely serious threat to the quality of life and the future health of elderly patients. Our Ultra Hip Protector offers distinctive advantages over competing products, through the use of unique materials.

Ultra-Lite Hip Protector

RECOMMENDED USE: Patients at risk of falling or hip fracture.

The **NYOrtho Ultra-Lite Hip Protector** is designed with energy absorbing foam pads that help to minimize injury from falls. Independent laboratory test data shows a 32.8% reduction in the amount of force transmitted to the hip trochanter bone. NYOrtho Ultra-Lite Hip Protectors place in the top five best performing pads as a result from a side-by-side test performed by an independent research institute.

Based on Laing et al., Journal of Biomechanics (2011) Volume 44, pages 2627–2635, completed with results of recent independent test results of BeoHip pads by S. Robinovitch.

- Most proven economical hip protector on the market.
- Unique energy absorbing foam pads conform to the contour of the body for secure fit.
- Sold as a kit with **two sets of briefs** and one set of removable pads so that patient never goes unprotected.
- Light, breathable, latex-free, polyester/spandex fabric provides optimal comfort.
- Unisex.

Model	Size	Fits Waist	Fits Hips	UOM
